How it works: There is a CD Key generator tool that is extremely easy to use. How it works: When you use it, it creates two files: A: Successful Key Creation. B: Your key used by the CD. The following is a list of the features of this tool. List of features: Exact results for all keyboards (Windows, Mac, DOS, UNIX,...) User defined keywords Randomly selected keys (lowercase, uppercase, numbers,...) The ability to completely change the keys Automatic and manual saving of keys Automatic and manual editing of keys A: Results: The results are printed in a new window. You will find the generated key printed in the file in b. B: Key Used By The CD: The second file b contains a string with the encoded key used by the CD. This tool is also available for all Windows platforms. However, the generated keys are not unicode compliant. A: What can I expect from the generated keys? All generated keys comply with the UCC of the Internet Key Exchange Protocol. That means that the files are converted into a hash-code which is used for the CD-Key. If the hash-code matches an existing hash-code the keys will be different. B: What to do when the key is used by the CD: In this case the generated keys are useless. Because they are only unique within the computer where they have been generated, not at all valid for CD-Keys. In this case you can use the saved key in the file. A: Support If you have a problem, you can download the latest version for Windows and read the manual. Or you can contact the support department at bluescarabsoftware.com (or you can use the Support section of the website). You can also report problems using this form. Got a keyboard with 4 USB ports? With this tutorial you can turn the bottom of your keyboard into 4 USB ports that will work just like your regular USB ports. What's cool about this hack is that it only takes a few minutes to make it, and doesn't require cutting or rewiring. Plus you can easily swap out the USB ports to match your current setup, as each USB port is built with a standard 3-pin interface. Let's take a look at what you need to accomplish this. Step 1: 1 Re-purpose the USB ports on your keyboard Start by opening up your keyboard. Most of these instructions can be done using an optional screwdriver, but if you don't have one, just pry open the top of the case a little bit with your fingernails. You'll need to carefully pry open the entire keyboard (top, bottom, and sides), so be prepared for this. Step 2: 1 Open up the keyboard. Step 3: 1 Carefully pry open the top of the keyboard. Step 4: 1 Pry open the keyboard. Step 5: 1 Carefully pry the top of the keyboard open. Step 6: 1
