- Tab-based word processor - Text editor and spreadsheet tool - Address book manager, note creator, and financial manager - Email client - Image viewer - Screen ruler - Quick web browser (NetSurfer) - Time-killing Tetris - Sorting tool - System monitoring applicationThe present invention relates to apparatus for measuring soil moisture and, more particularly, to apparatus of the type which measures moisture by transmitting ultrasonic energy through soil material and receiving echo signals reflected from interfaces between different soil types. It is well-known in the art that soil type is a major factor in the rate of moisture migration through soil materials. It is also well-known that the moisture content of soil in alluvial areas and other sites is far lower than that in rock-free areas and that this low moisture content facilitates soil water migration and the movement of plant life. Recently, the need has arisen for means to measure moisture levels in the soil in an area surrounding a well to determine the rate of moisture migration and to monitor the effects of wetting or drying on various plants in the area. To date, there has been no known means for accomplishing this task.Sex is a strong, compelling force. Its pull is undeniable, and while it can be very destructive when left unchecked, it can be downright beautiful when creatively expressed and explored. The multiple meaning of the word "sex" has been covered many times in the past, and maybe it is time to tell you a few things about it. The expression "on the down low" may mean several different things, and the same could be said of the term "bisexual." But the simple fact is that sex is something we all do, and it is something that is a part of all of us, regardless of how many partners we have or what type of relationship we have with our partner. We all have sex. We all have urges to have sex. We all have fantasies about sex. We all have sex organs. We all have a sex drive. We all have sex impulses. We all have sex feelings.
