AutoCAD Crack+ Incl Product Key [Win/Mac]

AutoCAD Architecture AutoCAD Architecture From its inception, AutoCAD has been available in two main versions: AutoCAD LT and AutoCAD Professional. AutoCAD LT is designed to meet the needs of small businesses and non-professional designers. It is available for free, except for the AutoCAD LT software itself, which can be purchased for approximately US\$1499 for the smallest available license. AutoCAD Professional is designed for use by professional designers and engineers. It is available in an annual subscription version, and is priced at approximately US\$1299. A new free AutoCAD is currently in development by Autodesk. Called AutoCAD R (for "rapid"), it is intended to replace the older AutoCAD LT. However, it will not be available until 2011. AutoCAD is a non-linear, 2D-CAD (two dimensional) program designed for creating architectural drawings and other 2D drafting work. One or more objects can be placed in a drawing. The user then can create an object, such as a line, a circle, a circle with lines in it, an arrow or a shape. If the object is a line, it can be straight or curved. If it is a circle, it can be circular, elliptical or irregular. Objects are composed of one or more faces. Faces are 2D geometric shapes that are perpendicular to each other and are joined by one or more lines. Face edges can be straight or curved, circular or irregular. Lines (also called vector objects) are used to join faces. Each line can have a unique width and color, and can be connected to one or more faces. When working with AutoCAD, the user must be aware of the coordinate system (x,y,z) used in the application. AutoCAD can be used with one of several coordinate systems. The default coordinate system used by AutoCAD is the cartesian system. In a drawing, all the objects will be contained within a

(0,0,0) coordinate plane. Use of different coordinate systems in a drawing can cause confusion when drawing an object, such as a line. For example, if a line is drawn in a plane (0,0,0) coordinate system, and then a shape is then overlaid on the same line, the width of the line and the shape will be the same. The origin (0

What's New in the AutoCAD?

A new collaboration capability with Markup Assist, a semi-automated alternative to full-blown editorial review, delivers fast, comprehensive, and accurate feedback. Markup Assist allows you to send your original drawing to a colleague for review with several different visibility settings. Reviewers can add comments, comments-to-self, or their own modifications directly to the drawing. AutoCAD's team collaboration integration allows reviewers to share their comments and modifications with other team members in real time, and to make those comments available offline. See how it works in the following videos: Markup import and Markup Assist video Markup assist video See how it works in the following videos: Let's talk about collaboration We're creating a more collaborative design environment. Share your projects and designs with your team. Invite others to collaborate on the same project with you. Learn how to: Invite others to collaborate on the same project with you. Learn how to: Launch and connect to your team Connect to people outside your team Team Collaboration Your team will be able to send comments and modifications directly to other members of your team, including people outside your organization. You can also share your comments and modifications with others outside your team. Connecting to your team members is now easier than ever. Invite team members to collaborate with you, and connect to your team members from anywhere. Easily share, send, and collaborate with people outside your team. Connect to your team members from anywhere. Let's talk about team collaboration Bring your team into the same room with you. Meet people outside your team in the same room. Let your team work together on the same drawings and designs. Design together, communicate together. Make it easier for your team to work together on the same drawings and designs. Work together, get feedback together. Receive feedback on the same drawings and designs you're working on, in real time. Create and share ideas together. Create and share ideas together.
