## What's New in the?

"Recover data from corrupted temporary files, such as autostart, lock screen, and hibernate files. If you are experiencing errors with hardware devices or software programs, the application will automatically analyze your system and present you with a list of files that are causing problems. Click these files to have the data removed. You can choose to scan for the same items on a specified drive. You will also be able to preview the resulting file on a modified version of the graphical user interface." Requirements: Windows 7 or Windows 8/8.1 Windows XP Cleaning average 0.5M. avg. file size. over 4.0M. avg. file size! Utilities 2 or more files saved recently to the recycle bin Significant cache files are created by applications that keep a history of recently used files in order to speed up future operations Running any automated maintenance procedures on your computer can result in the accumulation of unwanted temporary files on your system. However, most computers come with tools that are capable of managing them. One of such examples is the Temp File Cleaner. In fact, it is developed specifically for this purpose and is basically intended to act as a backup for a regular maintenance system. The interface of the application is easy to understand, even for less tech savvy users. It features a primary button, which is used to select either the whole hard drive or individual files or folders. Before you begin, you can decide to change the preview color to make it more pleasant. In addition, there are four main sections available to you; cleaning operations, properties, log and settings. Cleaning operations The cleaning operations view is what you need when it comes to a list of files that have turned into temporary data. As you can see, the interface is very extensive and can be used to view specifics of any file along with the options available when editing it. Settings The settings view is also quite interesting, letting you quickly customize the way the cleaning operations are performed. For example, you can choose the kind of search to be used (exact or case sensitive), how to combine search results, sort results by recently used, size or number of characters. Logs What you get is the log view, which is actually not a log. This is the view that gives you info on the status of cleaning. For example, you can view the current file, hash and name for a preview. As a reminder, the log view is only visible
