The Land Between is a fantasy world where magic exists and elven elders sustain life. At the center of this world is the Tower of Elders, the Seat of the Elden King. The Tower of Elders is a stronghold built on the peaks of a magnificent mountain range. It is the most sacred and important place in the Lands Between. Known as the "Dawn of the New Age" and "River of Time and Destiny," "the beginning," "the beginning of the end," and "the Hollow Mountain" for the past three hundred years, it is said to be a place where the Elden King resides, and where a grand quest for power and knowledge awaits. The Elden King is the first of the great heroes who ruled the Elden Kingdom. He was a kind-hearted, knowledgeable, and strong man who led his people to glory. However, after a long life, an accident occurred and he died in an accident, leaving the Elden Kingdom to the care of the next generation. In order to honor their ancestor, the next generation of Elden Knights was founded. People of the Elden Kingdom, known as "Elden Lords," gather to the Tower of Elders and maintain peace in the Lands Between. > \*This game features a single player adventure game.\* >\*The game allows you to fully enjoy real-time controlled battles, turn-based battles, and the party quests.\* >\*You can switch between real-time battle and the party quests anytime.\* >\*Various kinds of equipment are available according to your play style.\* >\*Various party members and sub quests are available.\* >\*Take any job to gain experience and increase your level.\* >\*Collect coins to exchange for valuable items and buy equipment.\* >\*Defeat powerful monsters and fulfill quests to obtain new items.\* >\*Manage the replenishment of your items.\* >\*The power of the crest item rises as your level rises.\* >\*You can use your crest item to increase your own power.\* >\*A high level and crest items allow you to acquire a variety of awesome prizes.\* >\*You can change your character class and develop your own play style.\* >\*You can customize your own fighter to your liking.\* >\*You can make your own world by constructing regions.\* >\*You can make your own extraordinary pieces of equipment and share them with the world.\* >\*You can

You're able to purchase crafting resources and power-ups and then spend the money on the newly created items to boost the stats of your character. There's a ton of information to be gained through this process and I'm sure you can see why this action bff6bb2d33

1. Field of the Invention This invention relates to the conversion of a continuous or longlength laser beam into a series of discrete pulses and, more particularly, to converting a continuous or longlength laser beam into a series of discrete pulses by converting the laser beam in an optical resonator including two curved mirrors which direct the laser beam into the optical resonator and from the optical resonator. 2. Description of the Prior Art For many years, digital signals have been generated by the count of clock pulses. To transmit such signals, clock pulses are generated by a variable frequency oscillator and the oscillation voltage is converted into a variable voltage which in turn is coupled into a transistor, thereby stepping the output of the oscillator from one clock pulse to the next. In the past, solid state lasers have employed optical cavities to convert a continuous laser beam to a train of spatially coherent pulses. However, such an optical resonator is costly, since it requires a high quality, single-mode glass fiber and a 50% or greater input-output coupling efficiency of the fiber. In contrast, crystal resonators produce discrete pulses in a cascade of birefringent crystals. However, a first order birefringent, dispersive crystal (a linear crystal) produces a step function type of pulse with a narrow halfbandwidth envelope. Thus, for the generation of a series of clock pulses, the birefringent crystal must be cascaded. So long as the birefringent material for a crystal resonator is substantially dispersive, this causes a transfer function to step. However, Fourier analysis of a transfer function which is essentially a continuum over a wide frequency interval between zero and the response to the fundamental or perhaps one of the higher order harmonics is generally unsatisfactory. For example, assume that a linear crystal resonator has a response at one harmonic of 200,000 and another harmonic of 20,000. The transfer function for this resonator initially has a very steep transition from zero to 200,000
