Before the game can start you will need a life! I always thought it was useful to pause the game in order to save your life. But now this is not required. The whole game is single player. You need to choose from a variety of weapons to make sure that you will survive the monster-attack. The monster is a huge robot that should be avoided. Make sure you pass all of the fences to reach the next location safely. You will find more than just enemies on your way. You will also face a boss that stands on a a higher ground. In this battle you can use your weapon or you can use special powerups or even combine them. There is a special Power-Up that makes you longer 'invisible' while moving. The cyberweapons have two modes and you will have to choose wisely.

have those 2... it doesn't get any better than this. Every Wednesday, from now on, and until I get bored of it, I'll be posting Metroid Prime Articles to the PC version. (seems to come up short of the N64 version... it's probably just becuase of Quake III which I was playing) First post will be with my review of the PC port of MP2, as the review will include some sort of preview/analysis of what's going on in MP3 and MP4. Can't have a Metroid Portal without a little proper spin on one of the many great FPS titles in the genre. Anti-City - The most unique aspect of the game, (and what set it apart from other "Metroid" games), is that you are no longer an outside threat to the planet's might, but an invading force from a distant, advanced civilization known only as the "Anti-City." While you're on the surface, you must fight anything (even you) who is obviously out to stop you from completing your most important task of saving the planet by exterminating its main population of sentient life. There's a massive advantage for you here, however, as the planet's factory goes out of its way to help you out, not surprisingly by equipping you with a spaceship to take you to the locked Sector Zero, a vast area of space where only

1. Technical Field The present invention generally relates to video processing and, in particular, to merging image sequences captured by a plurality of video cameras. **2. Description of the Related Art** With video surveillance technology becoming more popular, various methods for video merging have been proposed. Typical approaches attempt to merge multiple video images by a plurality of surveillance cameras. Image sequences captured by the plurality of video cameras are processed by a similar optical structure. Since the plurality of optical structures and the processing of image frames are physically identical, image information is exchanged and correlated by a single signal line. In general, image frames in one video are sequentially assembled into one common frame. Due to individual imaging errors of the plurality of video cameras and external conditions of the video cameras, the image frames gathered by multiple video cameras are not all the same. Also, the characteristics of merging video information by using a single optical structure are different than those of merging video information by a single video camera. Therefore, a merging video sequence cannot be exactly represented using a single uniform optical structure. For example, a plurality of video cameras are used to capture the same area and results of the same scene are distributed between the video cameras, leading to a viewing difference at the final merged video. Moreover, when image frames are aligned at a same direction, the merging scheme is known as "3D". The user may often intend to align images in the same direction for a clearer representation of a particular object. However, due to inherent physical limitations of the image frames in the "3D" video, the resulting video frames are not reliable. Therefore, there is a need for an improved method and apparatus for aligning video information, which could improve the reliability of the resultant video and provide full representation of a particular object during video merging.I started this series because most of my fans know

little or nothing about me, but I figured if people wanted to read my writing, chances are they want to know more about who I am and what I stand for. As I mentioned earlier, the Jazz are going to
