

In the early 1800s, the first attempts to create a universal language were made by the Illuminati, who had become interested in the Project since the early twentieth century. After the fall of the second French Empire, it was revived by an association headed by Baron de Hirsch and the Baroness de Koenigswarter. The project was soon abandoned when it became clear that mankind would not be able to work together in a universal language, even among themselves. While the project had been called a "universal language" from the very beginning, the Illuminati had wanted something stronger, more powerful and more worthy. They wanted the possibility of total control over the mind of the subjects they planned to brainwash. The leader of the project, Ferdinand Walter de Koenigswarter, later explained his motivations by saying that the Illuminati aimed to unite all humanity. One of the tasks assigned to the de Koenigswarter committee was to put together a system of universal symbols for communication and expression. These symbols would have to be universal as the most famous universal language, Esperanto, was created by the son of a member of the de Koenigswarter committee, and therefore was immediately recognized, and generally accepted. factory overlay of your window after arkitoolrar 1.7.12The car will fire a single stream of clouds if the two halves of the vehicle are moved in tandem and hard over, and in a shock-mounted car, the train will move with less friction and be more responsive. In a sedan, the back of the vehicle will move forward relative to the car. The system is reportedly based on technology used by high-speed rail systems developed by France and Japan. The company is touting the "Multi Bionic" vehicle as being able to drive on standard roads and on highways. Porsche has yet to reveal a concept or prototype of the car, although it has said that it will enter into high-speed testing this year. $t = 13t^{**2} + 3t + 2$ . Calculate  $r(t)$ . 14 Let  $s(d) = -d^{**3} + 8d^{**2} - 7d + 4$ . Let  $h(i) = -i + 1$ . Let  $g(f) = -5h(f) - s(f)$ . Give  $g(7)$ . 6 Let  $a(w) = 0w + w^{**3} + w + 5 - 2w^{**2} - 2$ . Calculate  $a(2)$ . 3
