A city filled with gunfire," Additional reporting by Alessandra Prentice in Gaza City and Andy Sullivan in Washington • Additional videos: AP/Reuters A policeman at an exit from Erez crossing in the besieged Gaza Strip. Image from Reuters / Reuters The Associated Press and Reuters contributed to this report. Read CNN's latest coverage of the Israeli-Palestinian conflict Watch CNN international editor Matthew Chance's full report This story was produced by The Huffington Post.Q: "Unpacked" number less than number of radix The last number is "packed" (length is minimal in which there are no 0). For example: 0101 is 19-bit number (0101 -> 101101) 01000 is 21-bit number (01000 -> 1001000) and 00001 is 18-bit number (00001 -> 1000101) The maximal result of unpacking any number (contacts) is equal to the sum of the length of corresponding number in bit (i.e. 19+21+18=58). The question: is there a number that has less than 58-bits? A: Of course there is. The base-10 system requires 10 digits, i.e. 20 different digits (there are 9 prime digits, plus 1 zero, and 1'subtract' digit). Using 00...0 as a first digit, we can 'unpack' each of the 10 digits by shifting it left by 2 until it ends with a 0. Then we continue shifting it right by 2. e.g. 9 is 011111...., so it is shifted right 8 times to get 0x01111100. And also, we take the other two digits as a decimal, so we get 9.857. This yields an unpacked number with 10-bits. EDIT: I just realised it is not entirely impossible to find a number with less than 58 bits, as we could use 01111100 as a second digit, etc. Nathan Brakefield is accused of killing his wife, three sons, and a daughter in their Brisdale neighborhood last fall.
