Agelong Tree is a complex family tree application that gives you the possibility of creating a detailed family tree based on personal, historical, and genealogical information. Customize it to match your needs, save time in your research and make your family history more precise. Agelong Tree allows you to create a family tree in several ways. In the Windows desktop version, you can create the entire tree manually or import data from the Internet, from other family trees and from a list of people you know. You can also use an.at4 file to import data from another Agelong Tree application or to modify the tree with a special format. Description: Back in the days when reliable photo scanning was only available to the rich, here is an update to the original Family Tree Maker Deluxe program. This includes compatibility with the latest data formats and updated user interface.

Description: Creeper is a Linux Live CD based on Ubuntu. Its goal is to give you complete control over your Linux system by: - booting from a compact boot CD that only takes 20MB of space - giving you complete control over your system by allowing you to change configuration files - creating a Live CD that works without installation (completely bootable) - giving you a quick setup environment, but at the same time giving you access to the latest and greatest tools - getting you started quickly The cd itself has two major components: - The Desktop component contains the major applications and their configuration. It also contains a number of scripts that make things happen on boot. - The Recovery component includes a recovery application that can fix many problems and a system recovery tool. Description: After playing around with Windows 95/98 for a while, I

decided to try Linux instead, and found myself with a beautiful operating system that looked very different to the Windows interface. I had used some GNU/Linux before, but the system I was using was a bit old, and I was having a few problems with it, so I decided to install a new version, which was much newer, and was a complete overhaul of the previous system. So here is my first impressions of the new system. Description: The game is a full-fledged crossword game with 509 puzzles in version 3.3.1. It has a bigger database than the previous game, which has more than 24,000 words and over 30,000 phrases. Description: The GNU/Linux port of Cadaver is a GPL-licensed program that presents a skeletal structure of your computer's anatomy as a useful tool. It can be used to find out what's wrong with your hardware and software, and to easily correct the problems. It also provides a useful interface for hardware debugging and diagnostics. The program can display and manipulate memory, disk, and system information. It can identify and show errors, compatibility
