Everything will become extremely simple (and fast!) to use in Photoshop, because of several tools, which have been added to the user interface. Every time you want to perform the same task you can accomplish it in a few clicks. The Photoshop features have been designed to give you a simple way to achieve the desired result, thus saving time and resources. One of the most important features for designing website is type-setting tools. With the introduction of Photoshop CS5 you now have the ability to export text and font from Photoshop and import them into Illustrator. This simple new feature will make it much easier for many types of design work to be done in Photoshop than before. In Photoshop CS5, the editing tools have been altered and added new features. For example, the new masking tools are similar to the ones found in Fireworks CS. This allows you to choose a different color and paint over selected areas on the image. FoG (Free-Form Object) is also available in Photoshop CS5. This tool helps you manipulate artwork creatively. You can draw in the image, crop out specific areas, and combine them together. It is faster and more convenient to use when compared to the Magic Wand tool. Brushes are to be used for a wide variety of photography and illustration. You can use them in flat areas of the image or to create a 3D effect. A cohesive set of new tools, including more than 200 pre-made styles such as eyelashes, hair, shines, reflections, etc., became available in the latest Photoshop release. You can drop down different styles and transparent or solid buttons on the image to show the adorably different looks.
