Levels is our “must have” tool. Optimizing lighting matched to your image can be easily done with 1 or 2 adjustments. But when you need to do something more complex or creative, Levels is the perfect tool for you. You can create dozens of different lighting profiles at the push of a button, which can be applied in real-time to a specific area of the image. Whether you are a landscape or stills photographer, once you master exposing RAW images properly, light is your most powerful tool. Depending on the style of your shoot, you may want to limit your images to certain levels of light, mid-tones, or shadows, for example. By exploring a simple tool like Levels, you can easily quickly and easily create and save lighting profiles that can be applied to specific areas of your canvas. And by working with the tool throughout the workflow, your workflow will be streamlined. Photoshop levels are designed to make your life as a photographer easier when it comes to post-processing and workflow. Levels will automatically enhance the image to make for more diverse lighting, tonality, and color. This tool makes dealing with light and tonal work even easier. What is more, because this tool is so easy to use, once you learn it, you will never have to look at your image in any other way. Some Lightroom users might complain that this is not the case. There are some similarities, but not many. Compared to an expensive high-end photo editing solution, Lightroom is a more flexible photo editing application. To get started, you can import multiple RAW-files at once, and get to work right away with the “Quick Develop mode.” Choosing which adjustments work best is relatively easy. Like Photoshop, Lightroom has a quiver of adjustment tools, but the lack of an Exposure Map, Spot Healing Brush, and Spot Removal tool is significant. Overall, the user experience is better and workflow is simpler. And with Lightroom 3.0, the only price for the bundled Photo Library and Catalog is \$19.99. To get extensive RAW editing, you will have to spend more money, as mentioned above, for either Photoshop Elements or Adobe Lightroom. Lightroom does give you quick access to your images without having to switch to your catalog first. In addition, the menus are easily navigable and the workflow is smooth. The choice comes down to the fact that Photoshop is reliable while Lightroom is exciting. For the few who are seasoned photo editing veterans, the Photoshop experience is probably more familiar. Many Lightroom features are also missing, but even the ones that are available are more basic.

Photoshop CC 2017 adds a number of features, such as faster masking, new slide, and gradient tools, as well as four Photoshop-inspired plug-ins for Microsoft Office documents and improvements to curves, a brand new Black & White adjustment, and several other enhancements. The new Photoshop can visualize the raw data of a production pipeline so designers and their collaborators can see what's going on across the board without leaving Photoshop. With Share for Review, people can view workspaces and data even while they're working offline, and collaborate in real-time on any projects across any surfaces. Share for Review gives people on the collaborative team the ability to view the project, without relying on a live connection. This removes the need to synchronize two or more instances of the app to ensure everyone is on the same page and that any changes to Photoshop have not been lost. Document Exchange caters to the most critical and important need for collaboration - the ability to share, open, and then view edits in real time. This essentially means Photoshop and other Creative Cloud (CC) applications don't need to be actively running to allow users to share edits. This functionality is great for on-the-go teams, remote teams, and teams with clients that work in different locations. The new Photoshop has greatly improved selection with the new, intuitive and easier-to-use, one-click selection tool. Using a new, intuitive interface, the new tool uses machine learning algorithms to detect objects and automatically highlight those objects. With an improved, one-click selection tool, you can now get more creative with your selection. Send us a comment about the new one-click move tool .
